
Project 5 Suggestions

ELE 420 / 520 Cyber-Physical Security

Hui Lin

Electrical, Computer, and Biomedical Engineering Department
University of Rhode Island

Project 5 for ELE 520

- An implementation work similar to the amount of work you observed in previous projects
 - Related to security, resilience, network analysis, cyber-physical systems, Internet-of-things, or other topics you would like to discuss with me
- Examples:
 - Simplified implementation of the evaluation of the paper you read
 - Some related side project of your research
 - Please do not directly re-use the work that you have done or published already
 - Simplified attacks you read about
 - Fundamental network profiling through Zeek

Report Requirement

- Follow IEEE Transaction Template (double-column)
- No more than 3 pages (not counting references and appendix)
 - You can attach snapshots or code snippets in the Appendix if that helps
 - No restriction on the number of pages for references and appendix
- Critical contents
 - What you try to implement
 - Why you choose this approach
 - The critical results that you find
 - The procedure to run your codes

Turn-in

- Deadline: May 9th, 11:59pm EST
- Include all source codes and the report in a single zip file, being named as “<Your Last Name>, <Your First Name>_Project 5.zip”
- Upload the zip file in Brightspace
